

EXPLORE HOW WE MEASURE

America's health security is influenced by many factors. The Index analyzes the most important measures of preparedness and identifies our collective strengths, and the opportunities to better prepare and keep a nation safe.

PREPARED

UNPREPARED

ALABAMA

The overall preparedness level in Alabama stands at 7.0, which is in the bottom one-third of U.S. states and is below the national average level of 7.5.

States can be sorted into three equally-sized groups, called Tertiles, based on their overall Index results. States in the 1st Tertile show above-average levels of preparedness, and those in the 3rd Tertile show below-average levels of preparedness. States in the 2nd (middle) Tertile have preparedness levels in line with the national average. Alabama falls into the 3rd Tertile.

States also can be grouped into Tertiles based on each of the 6 domains of preparedness used in this year's Index. Based on Tertile groupings, Alabama shows above-average results in 1 of these domains, while it shows below-average results in 3 of these domains.

Alabama falls within the top one-third of states in the area of Countermeasure Management. Alabama falls in the bottom one-third of states in the domains of Community Planning & Engagement, Health Care Delivery, and Environmental & Occupational Health, representing especially important areas to target for improvement.

The overall preparedness level in New Hampshire stands at 7.5, which is in the middle one-third of U.S. states and is in line with the national average level of 7.5.

States can be sorted into three equally-sized groups, called Tertiles, based on their overall Index results. States in the 1st Tertile show above-average levels of preparedness, and those in the 3rd Tertile show below-average levels of preparedness. States in the 2nd (middle) Tertile have preparedness levels in line with the national average. New Hampshire falls into the 2nd Tertile.

States also can be grouped into Tertiles based on each of the 6 domains of preparedness used in this year's Index. Based on Tertile groupings, New Hampshire shows above-average results in 2 of these domains, while it shows below-average results in 1 of these domains.

New Hampshire falls within the top one-third of states in the areas of Incident & Information Management, and Countermeasure Management. New Hampshire falls in the bottom one-third of states in the domain of Health Security Surveillance, representing especially important areas to target for improvement.

TEXAS

The overall preparedness level in Texas stands at 7.3, which is in the middle one-third of U.S. states and is in line with the national average level of 7.5.

States can be sorted into three equally-sized groups, called Tertiles, based on their overall Index results. States in the 1st Tertile show above-average levels of preparedness, and those in the 3rd Tertile show below-average levels of preparedness. States in the 2nd (middle) Tertile have preparedness levels in line with the national average. Texas falls into the 2nd Tertile.

States also can be grouped into Tertiles based on each of the 6 domains of preparedness used in this year's Index. Based on Tertile groupings, Texas shows above-average results in 1 of these domains, while it shows below-average results in 3 of these domains.

Texas falls within the top one-third of states in the area of Health Security Surveillance. Texas falls in the bottom one-third of states in the domains of Community Planning & Engagement, Health Care Delivery, and Countermeasure Management, representing especially important areas to target for improvement.
